Class - IX

## Topic - Area Theorems

1. $P$ and $Q$ are any two points lying on the sides $D C$ and $A D$ respectively of a parallelogram $A B C D$. Show that area of $\triangle A P B=$ area of $\triangle B Q C$.

## Solution:

Given a parallelogram ABCD, and $P$ and $Q$ are points lying on the sides $D C$ and $A D$ respectively as shown in the adjoining figure. As $\triangle \mathrm{APB}$ and \| gm ABCD are on the same base and between the same parallels

AB and DC ,
area of $\triangle \mathrm{APB}=\frac{1}{2}$ area of $\| \mathrm{gm} \mathrm{ABCD}$
Also, as $\triangle B Q C$ and $\| g m ~ A B C D$ are on the same $B C$ and between the
 and $B C$,
area of $\triangle B Q C=\frac{1}{2}$ area of $\| \mathrm{gm} \mathrm{ABCD}$
From (i) and (ii), we get
Area of $\triangle A P B=$ area of $\triangle B Q C$.
2. In the adjoining figure, ABCD is a rectangle with sides $\mathrm{AB}=8 \mathrm{~cm}$ and $\mathrm{AD}=5 \mathrm{~cm}$. Compute
(i) Area of parallelogram ABEF
(ii) Area of $\triangle E F G$.

Solution:
(i) Area of \| gm ABEF= area of rectangle ABCD (on the same base AB

and between the same parallels AB and DE )
$=(8 \times 5) \mathrm{cm}^{2}=40 \mathrm{~cm}^{2}$.
(ii) Area of $\triangle E F G=\frac{1}{2} \times$ area of $\|$ gm ABEF
(On the same base FE and between the same parallels FE and AG)

$$
=\left(\frac{1}{2} \times 40\right) \mathrm{cm}^{2}=20 \mathrm{~cm}^{2}
$$

## MATHEMATICS

3. ABCD is a trapezium with $\mathrm{AB} \| \mathrm{DC}$, and diagonals AC and BD meet at 0 . Prove that area of $\triangle \mathrm{DAO}=$ area of $\Delta$ OBC.

Solution:

| Statements | Reasons |
| :--- | :--- |
| 1. $\mathrm{AB} \\| \mathrm{DC}$ | 1. Given. |
| 2. Area of $\triangle \mathrm{ABD}=$ area of $\triangle \mathrm{ABC}$ | 2. $\Delta$ s on the same base AB and between <br> the same parallels AB and CD are <br> equal in area. |
| 3. Area of $\triangle \mathrm{DAO}+$ area of $\triangle \mathrm{OAB}$ <br> $=$ area of $\triangle \mathrm{OBC}+$ area of $\triangle \mathrm{OAB}$ | 3. Addition area axiom. |
| 4. Area of $\triangle \mathrm{DAO}=$ area of $\triangle \mathrm{OBC}$ <br> Q.E.D. | 4. Subtracting same area from both <br> sides. |

4. The diagonals of a parallelogram ABCD intersect at 0 . A straight line through 0 meets AB at P and the opposite side $C D$ at $Q$. Prove that area of quad. APABa of $\frac{1}{2}$ gm ABCD. Solution:

| Statements | Reasons |
| :--- | :--- |
| 1. Area of $\triangle \mathrm{ACD}=\frac{1}{2}$ area of $\\| \mathrm{gm} \mathrm{ABCD}$ | 1. Diagonal divides a $\\| \mathrm{gm}$ into two $\Delta \mathrm{s}$ of <br> equal area. |
| In $\triangle \mathrm{OAP}$ and $\triangle \mathrm{OCQ}$ |  |
| 2. $\angle \mathrm{OAP}=\angle \mathrm{OCQ}$ | 2. Alt. $\angle \mathrm{s}$. |
| 3. $\angle \mathrm{AOP}=\angle \mathrm{COQ}$ | 3. Vert. opp. $\angle \mathrm{s}$. |
| 4. $\mathrm{AO}=\mathrm{OC}$ | 4. Diagonals bisect each other. |
| 5. $\triangle \mathrm{OAP} \cong \triangle \mathrm{OCQ}$ | 5. ASA rule of congruency. |
| 6. Area of $\triangle \mathrm{OAP}=$ area of $\triangle \mathrm{OCQ}$ | 6. Congruence area axiom. |
| 7. Area of $\triangle \mathrm{OAP}+$ area of quad. AOQD <br> $=$ area of $\triangle \mathrm{OCQ}+$ area of quad. AOQD | 7. Adding same area on both sides. |
| 8. Area of quad. $\mathrm{APQD}=$ area of $\triangle \mathrm{ACD}$ | 8. Addition area axiom. |
| 9. Area of quad. APQD <br> $=\frac{1}{2}$ <br> Q.E.D. | 9. From of $\\| \mathrm{gm}$ and 1. |

5. In quadrilateral $A B C D, M$ is mid-point of the diagonal $A C$. Prove that area $\mathrm{ABMD}=$ area of quad. DMBC.

Solution:

| Statements | Reasons |
| :--- | :--- |
| 1. BM is median of $\triangle \mathrm{BCA}$ | 1. M is mid-point of AC (given). |
| 2. Area of $\triangle \mathrm{ABM}=$ area of $\triangle \mathrm{MBC}$ | 2. Median divides a $\Delta$ into two $\Delta \mathrm{s}$ of <br> equal area. |
| 3. DM is median of $\triangle \mathrm{DAC}$ | 3. M is mid-point of AC (given). |
| 4. Area of $\triangle \mathrm{DAM}=$ area of $\triangle \mathrm{DMC}$ | 4. Median divides a triangle into two <br> $\Delta$ s of equal area. |
| 5. Area of $\triangle \mathrm{ABM}+$ area of $\triangle \mathrm{DAM}=$ area of <br> $\Delta \mathrm{MBC}+$ area of $\triangle \mathrm{DMC}$ | 5. Adding 2 and 4. |
| 6. Area of quad. $\mathrm{ABMD}=$ area of quad. DMBC <br> Q.E.D. | 6. Addition area axiom. |

6. In the adjoining figure, ABCDE is any pentagon. BP drawn parallel to AC meets produced at $P$ and EQ drawn parallel to AD meets CD produced at $Q$. Prove

DC that area of $\mathrm{ABCDE}=$ area of $\triangle \mathrm{APQ}$.

## Solution:

$\triangle \mathrm{PCA}$ and $\triangle \mathrm{BCA}$ are on the same base CA and between same parallels $\mathrm{BP} \| \mathrm{AC}$.
$\therefore$ Area of $\triangle \mathrm{BCA}=$ area of $\triangle \mathrm{PCA}$
$\triangle E A D$ and $\triangle Q A D$ are on the same base $A D$ and between same parallels $E Q \| A D$,
$\therefore$ Area of $\triangle E A D=$ area of $\triangle Q A D$
Also, area of $\triangle A C D=$ area of $\triangle A C D$... (iii)
On adding (i), (iii) and (ii), we get area of $\triangle B C A+$ area of $\triangle A C D+$ area of $\triangle E A D$
$=$ area of $\triangle \mathrm{PCA}+$ area of $\triangle \mathrm{ACD}+$ area of $\triangle \mathrm{QAD}$
$\Rightarrow A r e a ~ o f ~ A B C D E=$ area of $\triangle A P Q$.
7. The diagonals $A C$ and $B D$ of a quadrilateral $A B C D$ intersect at $O$ in such a way that area of $\triangle O A D=$ area of $\triangle O B C$. Prove that $A B C D$ is a trapezium.

Solution:
Draw $\mathrm{DM} \perp \mathrm{AB}$ and $\mathrm{CN} \perp \mathrm{AB}$.
As DM and CN are both perpendiculars to AB , therefore, $\mathrm{DM} \| \mathrm{CN}$.
Given area of $\Delta \mathrm{OAD}=$ area of $\Delta \mathrm{OBC}$
$\Rightarrow$ Area of $\Delta \mathrm{OAD}+$ area of $\Delta \mathrm{OAB}=$ area of $\Delta \mathrm{OBC}+$ area of $\Delta \mathrm{OAB}$
(adding same area on both sides)
$\Rightarrow$ Area of $\Delta \mathrm{ABD}=$ area of $\Delta \mathrm{ABC}$
$\Rightarrow \frac{1}{2} \mathrm{AB} \times \mathrm{DM}=\frac{1}{2} \mathrm{AB} \times \mathrm{CN}$
$\Rightarrow \mathrm{DM}=\mathrm{CN}$.
Thus $\mathrm{DM} \| \mathrm{CN}$ and $\mathrm{DM}=\mathrm{CN}$, therefore, DMNC is a parallelogram
$\Rightarrow$ D C || MN i.e. DC || AB.
Hence, ABCD is a trapezium.
8. $A B C D$ is a trapezium with $A B \| D C$. A line parallel to $A C$ intersects $A B$ at $X$ and
$B C$ at $Y$.
Prove that: area of $\triangle A D X=$ area of $\triangle A C Y$.

## Solution:

Join CX.
As triangles ADX and ACX have same base AX and are between the same Parallels (AB || DC given, so, $A X$ || DC),
$\therefore$ Area of $\triangle \mathrm{ADX}=$ area of $\triangle \mathrm{ACX}$
As triangles $A C Y$ and $A C X$ have same base $A C$ and are between the same parallels (XY \| AC given),
$\therefore$ Area of $\triangle A C Y=$ area of $\triangle A C X$
From (i) and (ii), we get area of $\triangle A D X=$ area of $\triangle A C Y$.
9. $X Y$ is a line parallel to side $B C$ of a triangle $A B C$. If $B E \| C A$ and $F C \| A B$ and $F$ respectively, show that area of $\triangle A B E=$ area of $\triangle A C F$.

## Solution:

As $\triangle \mathrm{ABE}$ and $\| \mathrm{gm}$ EBCY have the same base BE and are between the same parallels
BE || CA (given),
$\therefore$ Area of $\triangle \mathrm{ABE}=\frac{1}{2} \times$ Area of $\|$ gm EBCY
As $\triangle \mathrm{ACF}$ and $\|$ gm XBCF have the same base CF and are between the same parallels FC || AB (given),
$\therefore$ Area of $\triangle \mathrm{ACF}=\frac{1}{2} \times$ Area of $\| \mathrm{gm} \mathrm{XBCF}$
But || gm EBCY and || gm XBCF have the same base BC and are between the same parallels (XY || BC given),
$\therefore$ Area of $\| \mathrm{gm}$ EBCY $=$ area of $\| \mathrm{gm}$ XBCF
$\Rightarrow \frac{1}{2} \times$ Area of $\left.\left|\mid\right.$ gm EBCY $=\frac{1}{2} \times$ Area of $| \right\rvert\,$ gm XBCF
$\Rightarrow$ Area of $\triangle \mathrm{ABE}=$ area of $\triangle \mathrm{ACF}$
10. In the adjoining figure, PQRS and $P X Y Z$ are two parallelograms of equal SX is parallel to YR.

## Solution:

Join XR, SY.
Given area of $\|$ gm PQSR $=$ area of $\| \mathrm{gm}$ PXYZ.

Subtract area of $\|$ gm PSOX from both sides.
$\therefore$ Area of $\| \mathrm{gm}$ XORQ $=$ area of $\| \mathrm{gm}$ SZYO
$\Rightarrow$ Area of $\Delta$
XOR $=$ area of $\triangle$ SYO (because diagonal divides a || gm into two equal areas)
Adding area of $\Delta$ OYR to both sides, we get area of $\Delta X Y R=$ area of $\Delta S Y R$.

An Innovative Learning Methodology by IITians.
Also the $\Delta s$ XYR and SYR have the same base YR, therefore, these lie between the same Parallels $\Rightarrow$ SX is parallel to YR.
11. In the adjoining figure, $A B C D, D C F E$ and $A B F E$ are parallelograms. Show that area of $\triangle A D E=$ area of $\triangle B C F$.

## Solution:

As ABCD is a parallelogram, $\mathrm{AD}=\mathrm{BC}$ (opp. sides of a \| gm)
Similarly, $\mathrm{DE}=\mathrm{CF}$ and $\mathrm{AE}=\mathrm{BF}$.
In $\triangle \mathrm{ADE}$ and $\triangle \mathrm{BCF}$,
$\mathrm{AD}=\mathrm{BC}, \mathrm{DE}=\mathrm{CF}$ and $\mathrm{AE}=\mathrm{BF}$

$\therefore \triangle \mathrm{ADE} \cong \triangle \mathrm{BCF}$ (by SSS rule of congruency)
$\therefore$ Area of $\triangle \mathrm{ADE}=$ area of $\triangle \mathrm{BCF}$ (congruent figures have equal areas)
12. Triangles $A B C$ and $D B C$ are on the same base $B C$ with $A, D$ on opposite sides of $B C$. If area of $\triangle A B C=$ area of $\triangle \mathrm{DBC}$, prove that BC bisects AD .

## Solution:

Let BC and AD intersect at 0 .
Draw $\mathrm{AM} \perp \mathrm{BC}$ and $\mathrm{DN} \perp \mathrm{BC}$.
Given area of $\Delta \mathrm{ABC}=$ area of $\Delta \mathrm{DBC}$

$$
\begin{aligned}
& \Rightarrow \frac{1}{2} \mathrm{BC} \times \mathrm{AM}=\frac{1}{2} \mathrm{BC} \times \mathrm{DN} \\
& \Rightarrow \mathrm{AM}=\mathrm{DN} .
\end{aligned}
$$

In $\triangle \mathrm{AMO}$ and $\triangle \mathrm{DNO}$,
$\angle \mathrm{AOM}=\angle \mathrm{DON}$ (vert. opp. $\angle \mathrm{s}$ )
$\angle \mathrm{AMO}=\angle \mathrm{DNO}$ (each angle $\left.=90^{\circ}\right)$
$\mathrm{AM}=\mathrm{DN}$ (proved above)
$\therefore \Delta \mathrm{AMO} \cong \Delta \mathrm{DNO}$ (AAS rule of congruency)
$\therefore \mathrm{A} \mathrm{O}=\mathrm{DO}$ (c.p.c.t.)
Hence, $B C$ bisects AD.
13. In the adjoining figure, ABCD is a parallelogram and BC is produced to a point
$Q$ such that $C Q=A D$. If $A Q$ intersects $D C$ at $P$, show that area of $\Delta \mathrm{BPC}=$ area of $\triangle \mathrm{DPQ}$.

## Solution:

Join AC. A s triangles BPC and APC have same base PC and are between the
same parallels ( $A B|\mid D C$ i.e. $A B| \mid P C$ ),
$\therefore$ Area of $\triangle \mathrm{BPC}=$ area of $\triangle \mathrm{APC} \ldots$ (i)
In quad. $A D Q C, A D \| C Q$
( $\because \mathrm{AD}|\mid \mathrm{BC}$, opp. sides of || gm ABCD)
$\mathrm{AD}=\mathrm{CQ}$ (given)
$\therefore$ ADQC is a parallelogram, so its diagonals AQ and DC bisect each other
i.e. $\mathrm{DP}=\mathrm{PC}$ and $\mathrm{AP}=\mathrm{PQ}$.

In $\triangle A P C$ and $\triangle Q P D, P C=D P$
$A P=P Q$
$\angle \mathrm{APC}=\angle \mathrm{QPD} \quad$ (vert. opp. $\angle$ s)
$\Delta \mathrm{APC} \cong \triangle \mathrm{QPD}$
$\therefore$ Area of $\triangle \mathrm{APC}=$ area of $\triangle \mathrm{DPQ} \ldots$... (ii)

From (i) and (ii), we get
Area of $\triangle \mathrm{BPC}=$ area of $\triangle \mathrm{DPQ}$.
14. ABC is a triangle whose area is $50 \mathrm{~cm}^{2}$. E and F are mid-points of the sides AB and AC respectively. Prove that EBCF is a trapezium. Also find its area.

## Solution:

Since E and F are mid-points of the sides AB and AC respectively,
$E F \| B C$ and $E F=1$
2 BC.
As EF \| $\operatorname{BC}, E B C F$ is a trapezium.

From A, draw $A M \perp B C$.
Let AM meet EF at N .
Since EF || BC, $\angle E N A=\angle B M N$.
But $\angle \mathrm{BMN}=90^{\circ}(\because \mathrm{AM} \perp \mathrm{BC})$
So $\angle E N A=90^{\circ}$ i.e. $A N \perp E F$.
Also, as E is mid-point of AB and $\mathrm{EN} \| \mathrm{BM}, \mathrm{N}$ is mid-point of AM .
Now, area of $\Delta \mathrm{AEF}=\frac{1}{2} \mathrm{EF} \times \mathrm{AN}=\frac{1}{2}\left(\frac{1}{2} \mathrm{BC} \times \frac{1}{2} \mathrm{AM}\right)=\frac{1}{4}\left(\frac{1}{2} \mathrm{BC} \times \mathrm{AM}\right)=\frac{1}{4}($ area of $\triangle \mathrm{ABC})$

## MATHEMATICS

$=\frac{1}{4}\left(50 \mathrm{~cm}^{2}\right)=12.5 \mathrm{~cm}^{2}$.
$\therefore$ Area of trapezium EBCF $=$ area of $\triangle \mathrm{ABC}-$ area of $\triangle \mathrm{AEF}$
$=50 \mathrm{~cm}^{2}-12 \cdot 5 \mathrm{~cm}^{2}=37 \cdot 5 \mathrm{~cm}^{2}$.
15. Prove that the area of the quadrilateral formed by joining the mid-points of the adjacent sides of a quadrilateral is half the area of the given quadrilateral.

## Solution:

A quadrilateral ABCD, and PQRS is the quadrilateral formed by joining mid-points of the sides $\mathrm{AB}, \mathrm{BC}, \mathrm{CD}$ and DA respectively.
To prove: Area of quad. $P Q R S=\frac{1}{2}$ area of quad. $A B C D$.

Construction: Join AC and AR.
Proof:

| Statements | Reasons |
| :---: | :---: |
| 1. Area of $\triangle A R D=\frac{1}{2}$ area of $\triangle A C D$ | 1. Median divides a triangle into two triangles of equal area. |
| 2. Area of $\triangle \mathrm{SRD}=\frac{1}{2}$ area of $\triangle \mathrm{ARD}$ | 2. Same as in 1. |
| 3. Area of $\triangle S R D=\frac{1}{4}$ area of $\triangle A C D$ | 3. From 1 and 2. |
| 4. Area of $\triangle P B Q=\frac{1}{4}$ area of $\triangle \mathrm{ABC}$ | 4. As in 3. |
| 5. Area of $\begin{aligned} & \mathrm{f} \triangle \mathrm{SRD}+\text { area of } \triangle \mathrm{PBQ} \\ & =\frac{1}{4} \text { (area of } \triangle \mathrm{ACD}+\text { area of } \triangle \mathrm{ABC} \text { ) } \end{aligned}$ | 5. Adding 3 and 4. |
| $\begin{aligned} & \text { 6. Area of } \triangle \mathrm{SRD}+\text { area of } \triangle \mathrm{PBQ} \\ & \qquad=\frac{1}{4} \text { area of quad. } \mathrm{ABCD} \end{aligned}$ | 6. Addition area axiom. |
| 7. Area of $\triangle A P S+$ area of $\triangle Q C R$ $=\frac{1}{4}$ area of quad. $A B C D$ | 7. Same as in 6. |
| 8. Area of $\triangle A P S+$ area of $\triangle P B Q+$ area of $\triangle Q C R$ + area of $\triangle S R D=\frac{1}{2}$ area of quad. $A B C D$ | 8. Adding 6 and 7. |
| 9. Area of $\triangle A P S+$ area of $\triangle P B Q+$ area of $\triangle Q C R$ + area of $\triangle$ SRD + area of quad. $\mathrm{PQRS}=$ area of quad. $A B C D$ | 9. Addition area axiom. |
| 10. Area of quad. $\mathrm{PQRS}=$ $\begin{aligned} & \frac{1}{2} \text { area of quad. } A B C D \\ & \text { Q.E.D. } \end{aligned}$ | 10. Subtracting 8 from 9 . |

16. $P$ and $Q$ are any two points lying on the sides $D C$ and $A D$ respectively of a parallelogram $A B C D$. Show that area of $\triangle A P B=$ area of $\triangle B Q C$.

## Solution:

Given a parallelogram $A B C D$, and $P$ and $Q$ are points lying on the sides $D C$ and $A D$ respectively as shown in the adjoining figure. As $\triangle A P B$ and $\| g m ~ A B C D$ are on the same base and between the same parallels AB and DC,
area of $\triangle \mathrm{APB}=\frac{1}{2}$ area of $\|$ gm ABCD ... (i)
Also, as $\triangle \mathrm{BQC}$ and $\| \mathrm{gm} \mathrm{ABCD}$ are on the same BC and between the
 and $B C$,
area of $\triangle \mathrm{BQC}=\frac{1}{2}$ area of $\| \mathrm{gm} \mathrm{ABCD}$
From (i) and (ii), we get
Area of $\triangle A P B=$ area of $\triangle B Q C$.
17. In the adjoining figure, ABCD is a rectangle with sides $\mathrm{AB}=8 \mathrm{~cm}$ and $\mathrm{AD}=5 \mathrm{~cm}$. Compute
(iii) Area of parallelogram ABEF
(iv)Area of $\Delta E F G$.

Solution:
(iii) Area of || gm ABEF= area of rectangle ABCD (on the same base AB
 and between the same parallels AB and DE )
$=(8 \times 5) \mathrm{cm}^{2}=40 \mathrm{~cm}^{2}$.
(iv)Area of $\triangle E F G=\frac{1}{2} \times$ area of $\|$ gm ABEF
(On the same base FE and between the same parallels FE and AG)

$$
=\left(\frac{1}{2} \times 40\right) \mathrm{cm}^{2}=20 \mathrm{~cm}^{2}
$$

18. $A B C D$ is a trapezium with $A B \| D C$, and diagonals $A C$ and $B D$ meet at 0 . Prove that area of $\triangle D A O=$ area of $\triangle \mathrm{OBC}$.

Solution:

| Statements | Reasons |
| :--- | :--- |
| 1. $\mathrm{AB} \\| \mathrm{DC}$ | 1. Given. |
| 2. Area of $\triangle \mathrm{ABD}=$ area of $\triangle \mathrm{ABC}$ | 2. $\Delta$ s on the same base AB and between <br> the same parallels AB and CD are <br> equal in area. |
| 3. Area of $\triangle \mathrm{DAO}+$ area of $\triangle \mathrm{OAB}$ <br> $=$ area of $\triangle \mathrm{OBC}+$ area of $\triangle \mathrm{OAB}$ | 3. Addition area axiom. |
| 4. Area of $\triangle \mathrm{DAO}=$ area of $\triangle \mathrm{OBC}$ <br> Q.E.D. | 4. Subtracting same area from both <br> sides. |

19. The diagonals of a parallelogram $A B C D$ intersect at $O$. A straight line through 0 meets $A B$ at $P$ and the opposite side CD at $Q$. Prove that area of quad.

APABa of $\frac{1}{2} \frac{1}{2}$ gm ABCD.

## Solution:

| Statements | Reasons |
| :---: | :---: |
| 1. Area of $\triangle \mathrm{ACD}=\frac{1}{2}$ area of $\\| \mathrm{gm} \mathrm{ABCD}$ | 1. Diagonal divides a $\\| \mathrm{gm}$ into two $\Delta \mathrm{s}$ of equal area. |
| In $\triangle O A P$ and $\triangle O C Q$ |  |
| 2. $\angle \mathrm{OAP}=\angle \mathrm{OCQ}$ | 2. Alt. $\angle \mathrm{s}$. |
| 3. $\angle \mathrm{AOP}=\angle \mathrm{COQ}$ | 3. Vert. opp. $\angle \mathrm{s}$. |
| 4. $\mathrm{AO}=\mathrm{OC}$ | 4. Diagonals bisect each other. |
| 5. $\triangle \mathrm{OAP} \cong \triangle \mathrm{OCQ}$ | 5. ASA rule of congruency. |
| 6. Area of $\triangle \mathrm{OAP}=$ area of $\triangle \mathrm{OCQ}$ | 6. Congruence area axiom. |
| 7. Area of $\triangle O A P+$ area of quad. $A O Q D$ $=$ area of $\triangle O C Q+$ area of quad. $A O Q D$ | 7. Adding same area on both sides. |
| 8. Area of quad. $A P Q D=$ area of $\triangle A C D$ | 8. Addition area axiom. |
| 9. Area of quad. $A P Q D$ $\begin{aligned} & =\frac{1}{2} \text { area of } \\| \mathrm{gm} \mathrm{ABCD} \\ & \text { Q.E.D. } \end{aligned}$ | 9. From 8 and 1. |

$\mathrm{ABMD}=$ area of quad. DMBC .

Solution:

| Statements | Reasons |
| :--- | :--- |
| 1. BM is median of $\triangle \mathrm{BCA}$ | 1. M is mid-point of AC (given). |
| 2. Area of $\triangle \mathrm{ABM}=$ area of $\triangle \mathrm{MBC}$ | 2. Median divides a $\Delta$ into two $\Delta \mathrm{s}$ of <br> equal area. |
| 3. DM is median of $\triangle \mathrm{DAC}$ | 3. M is mid-point of AC (given). |
| 4. Area of $\triangle \mathrm{DAM}=$ area of $\triangle \mathrm{DMC}$ | 4. Median divides a triangle into two <br> $\Delta s$ of equal area. |
| 5. Area of $\triangle \mathrm{ABM}+$ area of $\triangle \mathrm{DAM}=$ area of <br> $\Delta \mathrm{MBC}+$ area of $\triangle \mathrm{DMC}$ | 5. Adding 2 and 4. |
| 6. Area of quad. $\mathrm{ABMD}=$ area of quad. DMBC <br> Q.E.D. | 6. Addition area axiom. |

21. In the adjoining figure, ABCDE is any pentagon. BP drawn parallel to AC meets produced at P and EQ drawn parallel to AD meets CD produced at Q . Prove

DC that area of $\mathrm{ABCDE}=$ area of $\triangle \mathrm{APQ}$.

Solution:
$\triangle \mathrm{PCA}$ and $\triangle \mathrm{BCA}$ are on the same base CA and between same parallels $\mathrm{BP} \| \mathrm{AC}$.
$\therefore$ Area of $\triangle \mathrm{BCA}=$ area of $\triangle \mathrm{PCA}$
$\triangle E A D$ and $\triangle Q A D$ are on the same base $A D$ and between same parallels $E Q \| A D$,
$\therefore$ Area of $\triangle E A D=$ area of $\triangle Q A D$
Also, area of $\triangle A C D=$ area of $\triangle A C D$
On adding (i), (iii) and (ii), we get area of $\triangle \mathrm{BCA}+$ area of $\triangle \mathrm{ACD}+$ area of $\triangle \mathrm{EAD}$
$=$ area of $\triangle \mathrm{PCA}+$ area of $\triangle \mathrm{ACD}+$ area of $\triangle \mathrm{QAD}$
$\Rightarrow$ Area of $\mathrm{ABCDE}=$ area of $\triangle \mathrm{APQ}$.
22. The diagonals $A C$ and $B D$ of a quadrilateral $A B C D$ intersect at 0 in such a way that area of $\triangle \mathrm{OAD}=$ area of $\triangle \mathrm{OBC}$. Prove that ABCD is a trapezium.

## Solution:

Draw $\mathrm{DM} \perp \mathrm{AB}$ and $\mathrm{CN} \perp \mathrm{AB}$.
As DM and CN are both perpendiculars to AB , therefore, $\mathrm{DM} \| \mathrm{CN}$.
Given area of $\triangle \mathrm{OAD}=$ area of $\triangle \mathrm{OBC}$
$\Rightarrow$ Area of $\Delta \mathrm{OAD}+$ area of $\Delta \mathrm{OAB}=$ area of $\Delta \mathrm{OBC}+$ area of $\Delta \mathrm{OAB}$
(adding same area on both sides)
$\Rightarrow$ Area of $\Delta \mathrm{ABD}=$ area of $\Delta \mathrm{ABC}$
$\Rightarrow \frac{1}{2} \mathrm{AB} \times \mathrm{DM}=\frac{1}{2} \mathrm{AB} \times \mathrm{CN}$
$\Rightarrow \mathrm{DM}=\mathrm{CN}$.
Thus $D M \| C N$ and $D M=C N$, therefore, $D M N C$ is a parallelogram
$\Rightarrow D C \| M N$ i.e. $D C \| A B$.
Hence, ABCD is a trapezium.
23. $A B C D$ is a trapezium with $A B \| D C$. A line parallel to $A C$ intersects $A B$ at $X$ and
$B C$ at $Y$.
Prove that: area of $\triangle A D X=$ area of $\triangle A C Y$.

## Solution:

Join CX.
As triangles ADX and ACX have same base AX and are between the same
Parallels (AB || DC given, so, AX || DC),
$\therefore$ Area of $\triangle A D X=$ area of $\triangle A C X$
As triangles ACY and ACX have same base AC and are between the same parallels
(XY || AC given),
$\therefore$ Area of $\triangle A C Y=$ area of $\triangle A C X$

From (i) and (ii), we get area of $\triangle \mathrm{ADX}=$ area of $\triangle \mathrm{ACY}$.
24. $X Y$ is a line parallel to side $B C$ of a triangle $A B C$. If $B E$ || $C A$ and $F C|\mid A B$ and $F$ respectively, show that area of $\triangle A B E=$ area of $\triangle A C F$.

## Solution:

As $\triangle \mathrm{ABE}$ and $\| \mathrm{gm}$ EBCY have the same base BE and are between the same parallels $B E \| C A$ (given),
$\therefore$ Area of $\triangle \mathrm{ABE}=\frac{1}{2} \times$ Area of $\|$ gm EBCY
As $\triangle \mathrm{ACF}$ and \| gm XBCF have the same base CF and are between the same parallels FC || AB (given),
$\therefore$ Area of $\triangle \mathrm{ACF}=\frac{1}{2} \times$ Area of $\| \mathrm{gm}$ XBCF .
But || gm EBCY and || gm XBCF have the same base BC and are between the same parallels (XY || BC given),
$\therefore$ Area of $\| \mathrm{gm}$ EBCY $=$ area of $\| \mathrm{gm}$ XBCF
$\Rightarrow \frac{1}{2} \times$ Area of $\left|\mid\right.$ gm EBCY $=\frac{1}{2} \times$ Area of $\|$ gm XBCF
$\Rightarrow$ Area of $\triangle \mathrm{ABE}=$ area of $\triangle \mathrm{ACF}$
25. In the adjoining figure, $P Q R S$ and $P X Y Z$ are two parallelograms of equal SX is parallel to YR.

## Solution:

Join XR, SY.
Given area of $\|$ gm PQSR $=$ area of $\|$ gm PXYZ.

Subtract area of $\|$ gm PSOX from both sides.
$\therefore$ Area of \| gm XORQ = area of \| gm SZYO
$\Rightarrow$ Area of $\Delta$
XOR $=$ area of $\triangle$ SYO (because diagonal divides a || gm into two equal areas)
Adding area of $\Delta$ OYR to both sides, we get area of $\Delta \mathrm{XYR}=$ area of $\Delta \mathrm{SYR}$.
Also the $\Delta s$ XYR and SYR have the same base YR, therefore, these lie between the same
Parallels $\Rightarrow$ SX is parallel to YR.
26. In the adjoining figure, $A B C D, D C F E$ and $A B F E$ are parallelograms. Show that area of $\triangle A D E=$ area of $\triangle B C F$.

## Solution:

As ABCD is a parallelogram, $\mathrm{AD}=\mathrm{BC}$ (opp. sides of a \| gm)
Similarly, $\mathrm{DE}=\mathrm{CF}$ and $\mathrm{AE}=\mathrm{BF}$.
In $\triangle \mathrm{ADE}$ and $\triangle \mathrm{BCF}$,
$\mathrm{AD}=\mathrm{BC}, \mathrm{DE}=\mathrm{CF}$ and $\mathrm{AE}=\mathrm{BF}$
$\therefore \triangle \mathrm{ADE} \cong \triangle \mathrm{BCF}$ (by SSS rule of congruency)
$\therefore$ Area of $\triangle \mathrm{ADE}=$ area of $\triangle \mathrm{BCF}$ (congruent figures have equal areas)
27. Triangles $A B C$ and $D B C$ are on the same base $B C$ with $A, D$ on opposite sides of $B C$. If area of $\triangle A B C=$ area of $\triangle \mathrm{DBC}$, prove that BC bisects $A D$.

## Solution:

Let BC and AD intersect at 0 .
Draw $\mathrm{AM} \perp \mathrm{BC}$ and $\mathrm{DN} \perp \mathrm{BC}$.
Given area of $\Delta \mathrm{ABC}=$ area of $\Delta \mathrm{DBC}$
$\Rightarrow \frac{1}{2} \mathrm{BC} \times \mathrm{AM}=\frac{1}{2} \mathrm{BC} \times \mathrm{DN}$
$\Rightarrow \mathrm{AM}=\mathrm{DN}$.
In $\triangle \mathrm{AMO}$ and $\triangle \mathrm{DNO}$,
$\angle \mathrm{AOM}=\angle \mathrm{DON}$ (vert. opp. $\angle \mathrm{s}$ )
$\angle \mathrm{AMO}=\angle \mathrm{DNO}$ (each angle $\left.=90^{\circ}\right)$
$\mathrm{AM}=\mathrm{DN}$ (proved above)
$\therefore \Delta \mathrm{AMO} \cong \Delta \mathrm{DNO}$ (AAS rule of congruency)
$\therefore \mathrm{A} 0=\mathrm{DO}$ (c.p.c.t.)
Hence, BC bisects AD.
28. In the adjoining figure, $A B C D$ is a parallelogram and $B C$ is produced to a point $Q$ such that $C Q=A D$. If $A Q$ intersects $D C$ at $P$, show that area of $\Delta \mathrm{BPC}=$ area of $\triangle \mathrm{DPQ}$.

## Solution:

Join AC. A s triangles BPC and APC have same base PC and are between the

same parallels ( $\mathrm{AB}|\mid \mathrm{DC}$ i.e. $\mathrm{AB} \mathrm{|\mid} \mathrm{PC)}$,
$\therefore$ Area of $\triangle \mathrm{BPC}=$ area of $\triangle \mathrm{APC} \ldots$ (i)
In quad. $\mathrm{ADQC}, \mathrm{AD} \| \mathrm{CQ}$
( $\because \mathrm{AD}|\mid \mathrm{BC}$, opp. sides of || gm ABCD)
$A D=C Q$ (given)
$\therefore$ ADQC is a parallelogram, so its diagonals AQ and DC bisect each other
i.e. $\mathrm{DP}=\mathrm{PC}$ and $\mathrm{AP}=\mathrm{PQ}$.

In $\triangle \mathrm{APC}$ and $\triangle \mathrm{QPD}, \mathrm{PC}=\mathrm{D} P$
$\mathrm{AP}=\mathrm{PQ}$
$\angle \mathrm{APC}=\angle \mathrm{QPD} \quad$ (vert. opp. $\angle$ s)
$\Delta \mathrm{APC} \cong \triangle \mathrm{QPD}$
$\therefore$ Area of $\triangle \mathrm{APC}=$ area of $\triangle \mathrm{DPQ} \ldots$ (ii)

From (i) and (ii), we get
Area of $\triangle \mathrm{BPC}=$ area of $\triangle \mathrm{DPQ}$.
29. $A B C$ is a triangle whose area is $50 \mathrm{~cm}^{2}$. $E$ and $F$ are mid-points of the sides $A B$ and $A C$ respectively. Prove that EBCF is a trapezium. Also find its area.

## Solution:

Since $E$ and $F$ are mid-points of the sides $A B$ and $A C$ respectively,
$\mathrm{EF} \| \mathrm{BC}$ and $\mathrm{EF}=1$
2 BC.
As EF || $\mathrm{BC}, \mathrm{EBCF}$ is a trapezium.

From A, draw $A M \perp B C$.
Let AM meet EF at N .
Since EF || $B C, \angle E N A=\angle B M N$.
But $\angle B M N=90^{\circ}(\because A M \perp B C)$
So $\angle E N A=90^{\circ}$ i.e. $A N \perp E F$.
Also, as E is mid-point of $A B$ and EN || BM, N is mid-point of AM.
Now, area of $\Delta \mathrm{AEF}=\frac{1}{2} \mathrm{EF} \times \mathrm{AN}=\frac{1}{2}\left(\frac{1}{2} \mathrm{BC} \times \frac{1}{2} \mathrm{AM}\right)=\frac{1}{4}\left(\frac{1}{2} \mathrm{BC} \times \mathrm{AM}\right)=\frac{1}{4}($ area of $\Delta \mathrm{ABC})$
$=\frac{1}{4}\left(50 \mathrm{~cm}^{2}\right)=12.5 \mathrm{~cm}^{2}$.
$\therefore$ Area of trapezium EBCF $=$ area of $\triangle \mathrm{ABC}$ - area of $\triangle \mathrm{AEF}$
$=50 \mathrm{~cm}^{2}-12 \cdot 5 \mathrm{~cm}^{2}=37 \cdot 5 \mathrm{~cm}^{2}$.
30. Prove that the area of the quadrilateral formed by joining the mid-points of the adjacent sides of a quadrilateral is half the area of the given quadrilateral.

## Solution:

A quadrilateral $A B C D$, and PQRS is the quadrilateral formed by joining mid-points of the sides $\mathrm{AB}, \mathrm{BC}, \mathrm{CD}$ and DA respectively.
To prove: Area of quad. $P Q R S=\frac{1}{2}$ area of quad. $A B C D$.

Construction: Join AC and AR.
Proof:

| Statements | Reasons |
| :---: | :---: |
| 1. Area of $\triangle A R D=\frac{1}{2}$ area of $\triangle A C D$ | 1. Median divides a triangle into two triangles of equal area. |
| 2. Area of $\triangle$ SRD $=\frac{1}{2}$ area of $\triangle \mathrm{ARD}$ | 2. Same as in 1. |
| 3. Area of $\triangle$ SRD $=\frac{1}{4}$ area of $\triangle \mathrm{ACD}$ | 3. From 1 and 2. |
| 4. Area of $\triangle \mathrm{PBQ}=\frac{1}{4}$ area of $\triangle \mathrm{ABC}$ | 4. As in 3. |
| 5. Area of $\triangle S R D+$ area of $\triangle P B Q$ $=\frac{1}{4}($ area of $\triangle A C D+$ area of $\triangle A B C)$ | 5. Adding 3 and 4. |
| 6. Area of $\triangle$ SRD + area of $\triangle$ PBQ $=\frac{1}{4}$ area of quad. $A B C D$ | 6. Addition area axiom. |
| $\begin{aligned} \text { 7. Area of } \triangle \mathrm{APS}+\text { area of } & \triangle \mathrm{QCR} \\ & =\frac{1}{4} \text { area of quad. } \mathrm{ABCD} \end{aligned}$ | 7. Same as in 6. |
| 8. Area of $\triangle A P S+$ area of $\triangle P B Q+$ area of $\triangle Q C R$ + area of $\triangle S R D=\frac{1}{2}$ area of quad. $A B C D$ | 8. Adding 6 and 7. |
| 9. Area of $\triangle \mathrm{APS}+$ area of $\triangle \mathrm{PBQ}+$ area of $\triangle \mathrm{QCR}$ + area of $\triangle$ SRD + area of quad. $\mathrm{PQRS}=$ area of quad. ABCD | 9. Addition area axiom. |
| 10. Area of quad. $\mathrm{PQRS}=$ $\begin{aligned} & \frac{1}{2} \text { area of quad. } \mathrm{ABCD} \\ & \text { Q.E.D. } \end{aligned}$ | 10. Subtracting 8 from 9 . |
