Board - ICSE
Class -IX

Topic - Isosceles Triangle

1. If two sides of a triangle are equal, the opposite angles to them are also equal.
2. In the diagram given below $\mathrm{BD} \cong \mathrm{AD} \cong \mathrm{AC}$ and $\mathrm{m} \angle \mathrm{ABD}=32^{\circ}$.

Find the measures of

a) $\angle \mathrm{BAD}$
b) $\angle \mathrm{ADB}$
c) $\angle \mathrm{ACD}$
d.) $\angle \mathrm{CAD}$
3. In triangle $A B C, A B \cong A C$. Find the values of $x, y$. Also calculate the lengths $A B, A C$ and the measures of angles $B$ and $C$.

4. ABC and BCD are isosceles triangles. Find the size of angle BDE.

5. In Fig. 6.9, $\mathrm{BC}=\mathrm{CA}$ and $\angle \mathrm{A}=40$. Then, $\angle \mathrm{ACD}$ is equal to

6. $\triangle \mathrm{CAB}$ and $\triangle \mathrm{CTB}$ are isosceles. $\mathrm{m} \angle \mathrm{CTB}=87^{\circ}$ and $\mathrm{m} \angle \mathrm{CAB}=65^{\circ}$ Find $\mathrm{m} \angle \mathrm{ACT}$.

7. In fig, given below $\mathrm{AB}=\mathrm{AC}$. Prove that: $\angle B O C=\angle A C D$.

8. in the given figure: $A E\|B D, A C\| E D$ and $A B=A C$.find $\angle a, \angle b$ and $\angle c$.

9. Prove that the bisector of the base angles of an isosceles triangle is equal.
10. In triangle $A B C ; A B=A c$. $P, Q$ and $R$ are midpoints of sides $A B, A C$ and $B C$ respectively. Prove that: (i) $P R=Q R$ (ii) $B Q=C P$

## Answer

1. Proving
2. a) $\mathrm{m} \angle \mathrm{BAD}=32^{\circ}$ b) $\mathrm{m} \angle \mathrm{ADB}=116^{\circ}$ c) $\mathrm{m} \angle \mathrm{ACD}=116^{\circ}$ d) $\mathrm{m} \angle \mathrm{CAD}=52^{\circ}$
3. $\angle B=\angle C=50^{\circ}$
4. $\angle B D E=12^{\circ}$
5. $\angle A C D=80^{\circ}$
6. $\angle A C T=104^{\circ}$
7. Proving
8. $\angle a=64^{\circ} \angle b=58^{\circ} \angle c=58^{\circ}$
9. Proving
10. Proving
