Topic – Constructions Solved Examples

1. Using a ruler and a compass construct a triangle ABC in which  $AB = 7$  cm,  $\angle CAB = 60^\circ$  and  $AC = 5$  cm. Construct the locus of:

(i) points equidistance from AB and AC.

(ii) points equidistant from BA and BC.

Hence construct a circle touching the three sides of the triangle internally.

**Solution :**

Given,  $AB = 7$  cm,  $\angle CAB = 60^\circ$ ,  $AC = 5$  cm

Steps of construction:

(1) Construct triangle ABC with given measurements.

(2) Draw bisector of  $\angle BAC$  which is the locus of points equidistant from AB and AC.

(3) Draw bisector of  $\angle ABC$  which is the locus of points equidistant from AB and BC.

(4) Let the bisectors meet at O.

(5) Draw a perpendicular from O to AB intersecting AB at D.

(6) Taking O as centre and OD as radius, construct a circle touching the three sides of triangle internally.

2. Using ruler and compass only, construct a  $\Delta ABC$  such that  $BC = 5$  cm and  $AB = 6.5$  cm and  $\angle ABC = 120^\circ$

(i) Construct a circum-circle of  $\Delta ABC$

(ii) Construct a cyclic quadrilateral ABCD, such that D is equidistant from AB and BC.

**Solution :**

Steps of construction:

- 1) Draw a line segment BC of length 5 cm.
- 2) At B, draw a ray BX making an angle of  $120^\circ$  with BC.
- 3) With B as centre and radius 6.5 cm, draw an arc to cut the ray BX at A.  
Join AC.  $\triangle ABC$  will be obtained
- 4) Draw the perpendicular bisectors of AB and BC to meet at point O.
- 5) With O as centre and radius OA, draw a circle. The circle will circumscribe  $\triangle ABC$
- 6) Draw the angle bisector of  $\angle ABC$
- 7) The angle bisector of  $\angle ABC$  and let it meet circle at point D.
- 8) Join AD and DC to obtain the required cyclic quadrilateral ABCD such that point D is equidistant from AB and BC.

3. Use ruler and compass only for answering this question.

Draw a circle of radius 4 cm. Mark the centre as O. Mark a point P outside the circle at a distance of 7 cm from the centre. Construct two tangents to the circle from the external point P.

Measure and write down the length of any one tangent.

**Solution :**

- i. Draw a line segment  $OP = 7$  cm
- ii. With centre O and radius 4 cm, draw a circle.
- iii. Draw the mid-point of OP.
- iv. With centre M and diameter OP, draw a circle which intersect the circle at T and S.
- v. Joint PT and PS

PT and PS are the required tangent on measuring the length of  $PT = PS = 5.74$  cm

4. Using ruler and a compass only construct a semi-circle with diameter  $BC = 7$  cm. Locate a point  $A$  on the circumference of the semicircle such that  $A$  is equidistant from  $B$  and  $C$ . Complete the cyclic quadrilateral  $ABCD$ , such that  $D$  is equidistant from  $AB$  and  $BC$ . Measure  $\angle ADC$  and write it down.

**Solution :**

- i. Draw a line segment  $BC = 7$  cm
- ii. Taking mid-point of  $BC$  as centre  $O$ , draw a semi-circle with radius  $= 3.5$  cm
- iii. Now, the semicircle circumscribes the  $\triangle ABC$
- iv. Draw angle bisector of  $\angle ABC$  and make it intersect the semi-circle at  $D$ .
- v. Measure the angle  $\angle DBC$  which comes out to be  $22.5^\circ$

5. Using ruler and compass construct a triangle  $ABC$  in which  $BC = 4$  cm,  $\angle ACB = 45^\circ$  and a perpendicular from  $A$  on  $BC$  is  $2.5$  cm. Hence construct a circle circumscribing the triangle  $\triangle ABC$ . Measure and write down the radius of the circle.

**Solution :**

Steps of Construction:

- i) Draw a line segment  $BC = 4$  cm.
  - ii) At  $C$ , draw a perpendicular line  $CX$  and from it, cut off  $CE = 2.5$  cm.
  - iii) From  $E$ , draw another perpendicular line  $EY$ .
  - iv) From  $C$ , draw a ray making an angle of  $45^\circ$  with  $CB$ , which intersects  $EY$  at  $A$ .
  - v) Join  $AB$ .
  - vi)  $\triangle ABC$  is the required triangle.
  - vii) Draw perpendicular bisectors of sides  $AB$  and  $BC$  intersecting each other at  $O$ .
  - viii) With centre  $O$ , and radius  $OB$ , draw a circle which will pass through  $A$ ,  $B$  and  $C$ .
- Measuring the radius  $OB = OC = OA = 2$  cm

6. Using a ruler and a compass construct a triangle  $ABC$  in which  $AB = 7$  cm,  $\angle CAB = 60^\circ$  and  $AC = 5$  cm. Construct the locus of

points equidistant from AB and AC

points equidistant from BA and BC

Hence construct a circle touching the three sides of the triangle internally.

**Solution :**

Steps of construction:

- 1) Draw a line  $AB = 7$  cm
- 2) Taking P as centre and same radius, draw an arc of a circle which intersects AB at M.
- 3) Taking M as centre and with the same radius as before drawn an arc intersecting previously drawn arc, at point N.
- 4) Draw the ray AX passing through N, then
- 5) Taking A as centre and radius equal to 5 cm, draw an arc cutting AX at C.
- 6) Join BC
- 7) The required triangle ABC is obtained.
- 8) Draw angle bisector of  $\angle CAB$  and  $\angle ABC$
- 9) Mark their intersection as O
- 10) With O as center, draw a circle with radius OD

7. Using ruler and compass only, construct a  $\Delta ABC$  such that  $BC = 5$  cm and  $AB = 6.5$  cm and  $\angle ABC = 120^\circ$

- i. Construct a circum-circle of  $\Delta ABC$
- ii. Construct a cyclic quadrilateral  $ABCD$ , such that  $D$  is equidistant from  $AB$  and  $BC$ .

**Solution :**

Steps of construction:

- 1) Draw a line segment  $BC$  of length  $5\text{ cm}$ .
- 2) At  $B$ , draw a ray  $BX$  making an angle of  $120^\circ$  with  $BC$ .
- 3) With  $B$  as centre and radius  $6.5\text{ cm}$ , draw an arc to cut the ray  $BX$  at  $A$ . Join  $AC$ .  
 $\triangle ABC$  will be obtained
- 4) Draw the perpendicular bisectors of  $AB$  and  $BC$  to meet at point  $O$ .
- 5) With  $O$  as centre and radius  $OA$ , draw a circle. The circle will circumscribe  $\triangle ABC$
- 6) Draw the angle bisector of  $\angle ABC$
- 7) The angle bisector of  $\angle ABC$  and let it meet circle at point  $D$ .
- 8) Join  $AD$  and  $DC$  to obtain the required cyclic quadrilateral  $ABCD$  such that point  $D$  is equidistant from  $AB$  and  $BC$ .
